

# Tony feedback · deck insertion guide

NutriSync Collective · English · Version 1.0 · 8 September 2026

Use the **Core 6 Slides PowerPoint** for the meeting insert. The full Deck Insert PowerPoint and its PDF contain the same six slides plus two optional backups. Notes and source references are embedded; a separate Markdown notes file is also supplied.

## Recommended placement

| Slide                | Purpose / placement                                                                       |
|----------------------|-------------------------------------------------------------------------------------------|
| 1 · Market entry     | After "Business Model": three practical routes to customers.                              |
| 2 · Customer funnel  | After slide 1: bottom-up invitations, activation, payment and acquisition-cost target.    |
| 3 · Funding scopes   | Replace the conflicting old ask: €15–25K, €250–350K and €2–5M.                            |
| 4 · €2M versus €5M   | After slide 3: compare concrete allocations over the same proposed 24 months.             |
| 5 · Execution        | After slide 4: Spain milestones; Australia / Singapore exploration and country readiness. |
| 6 · Investor returns | Before the close: clearly hypothetical ownership, dilution and proceeds scenarios.        |
| A / B · Backups      | Appendix only: detailed marketing allocations and the cautious growth stress test.        |

## Keep the design when copying

Use **Keep Source Formatting**. The insert is a native, editable 16:9 PowerPoint with a dedicated master, coral/off-white colours, cream panels and Roboto Condensed typography. It recreates the visual style; it is not a cloned original master. Exact source-font metadata was unavailable. The PDF shows the intended rendering; missing fonts may be substituted in PowerPoint.

## Reconcile before external circulation

Choose the financing scope and remove the conflicting old €250K/€350K ask or overlapping projections. Funding ranges are not automatically additive. Budgets, funnel rates, payer-acquisition targets and returns are planning assumptions—not achieved traction. The €10M post-money example is not an agreed valuation; loss and illiquidity remain possible. No country launch, grant, partnership or pregnancy release is assumed.

## Sources and version control

Amounts use the **Value and Business Proposal EN v1.0** and its planning workbook. Relevant tabs: Funding, Marketing, GTM inputs, GTM illustration and Return illustration. Speaker notes identify the supporting proposal sections and source-annex documents. The source Canva presentation was read for design context. Original decks, proposal, workbook and prior package were not modified.

Use slide titles rather than old page numbers: the reference deck versions have different lengths. No additional cover or closing page is included.
